NP striped marlin annual catch limits applicable to China, Japan, Korea, Chinese Taipei, United States and other CCMs, noting that overall total catch limit for the fishery of 2400 mt

Status: Active

Full Text

5. Japan, Chinese Taipei, Korea, United States, and China shall, respectively, ensure their annual catches of North Pacific striped marlin shall not exceed the annual catch limits in the table below, without prejudice to future agreements on allocation of TAC. Any CCM not included in the table below shall also ensure that its catch of North Pacific striped marlin does not result in an exceedance of the overall total catch limit of 2400 mt.

Included in ARPt2
Included in CMR

Each CCMs Annual Catch Limit:

- China 68.8mt
- Japan 1454.4mt
- Korea 214.8mt
- Chinese Taipei 358.4mt
- United States 228.4mt

TOTAL of these CCMs annual catch limits: 2324.8mt

6. Any unused TAC from a given year will be placed in a reserve and be available for use by the CCMs in the table above in future years, as described in paragraphs 7 and 8 of this CMM. Each CCM will be able to use up to an additional 165 mt over its annual catch limit, so long as there is available catch in the reserve. (footnote 1)

footnote 1: The United States, based on historical fishing levels, may, for management purposes, presume an underage and the availability of the additional 165mt of catch.

7. In 2023, there was an 826 mt underage of the TAC of 2400 mt that will be available to CCMs fishing in 2025. Any underage from 2024 will be available to CCMs in 2026, and any underage from 2025 will be available to CCMs in 2027.

8. CCMs whose domestic authorities would require that they shut down their target fishery as a result of this measure shall receive preference in access to any available reserve.

9. Each flag/chartering CCM shall decide on the management measures required to ensure that its flagged/chartered vessels operate under the catch limits specified in paragraph 5 of this CMM, noting that previous examples of such measures have included effort reductions, gear modification and spatial management.

11. After their respective catch limits are reached, CCMs shall require their flagged vessels to promptly release to the extent possible North Pacific striped marlin specimens that are alive and haulback in a manner that maximize post release survival while giving due consideration to the safety of crew and

Effective From

01 Feb 2025

Applicability Definition

Applies to China, Japan, Korea, Chinese Taipei, United States and other CCMs with fishing vessels fishing in Convention Area north of the equator which has catches of North Pacific Striped Marlin in a year. There is an exemption for SIDS, which includes territories, in the Convention Area (para 3)

Supersedes

members.

12. Any excess of the annual catch limits for North Pacific striped marlin established above shall be deducted from the respective catch limits during the adjustment year (i.e., the year following the Compliance Monitoring Report (CMR) that identified an overharvest).

3. Nothing in this measure shall prejudice the legitimate rights and obligations of Small Island Developing State Members and participating territories in the Convention Area seeking to develop their own domestic fisheries.
